Books on Singing and the Voice

Frank E. Miller, M. D.

THE VOICE, Its production, care and preservation. Price, Cloth \$1.25

No one could be better fitted to write with authority and understanding concerning the proper development and use of the vocal organs than a leading throat specialist, to whose medical knowledge is added the results of his own experience as a professional singer. The ability to consider his problem from two absolutely differing points of view is what gives his little volume a value quite out of the ordinary, for it allows him to indicate a correct and rational physiological method of voice-production while making full allowance for the psychological factors involved, such as mentality, artistic temperament, and correct conception on the part of the singer of the pitch, quality of tone, etc. to be produced.

W. E. Haslam

STYLE IN SINGING. Price \$1.50

The subject-matter of this book, provided with one hundred musical illustrations, is handled throughout in a manner which makes it easy to understand and comprehend thoroughly all the interconnected detail which goes toward the making of "style" in singing, and whose command enables the singer to attain to perfection in his art.

Reinhold L. Herman

AN OPEN DOOR FOR SINGERS. Price, \$2.00

The author has written these "hints" in order "to prevent singers from doing the *unnatural*, from expecting the *supernatural*, from struggling to surpass personal, *unchangeable limitations*, with the bitter sacrifice of years, health, money and voice."

In his aim to point out a reasonable way of looking at vocal attainment Mr. Herman has been more than successful. His book is an eminently sane and practical contribution to a "wholesome tradition" of vocal art. Without being in any way didactic, it is constantly helpful in condemning, with the directness of good common-sense, "errors which are but too constant," and in "opening doors at which the bewildered student often knocks desperately and fruitlessly."

Camille Thurwanger

MUSICAL DICTION. Price, \$1.50

An Orthologic Method for Acquiring a Perfect Pronunciation in the Speaking and Especially in the Singing of the French Language.

Completely covering its subject, the book supplies a demand which thus far has not met with an adequate response. In many cases the books already written on the subject of French diction are the works of authors, perhaps otherwise learned but deficient in knowledge of acoustics and phonetics, and sometimes totally ignorant of voice-production in singing. It is the author's authoritative knowledge of just these subjects that gives the work its special value. To sum up: The book represents the first method, written from the standpoint of English-speaking people, whose study will make it possible for a student of average intelligence to "sing French as purely and as perfectly as the best French native singer," in a relatively short time.
